I am new to PHP and I have a question

regarding uploading an image to a post. I have a form with two submit buttons; one to upload an image and one to save a picture. I would like to use the save button to upload the image using the form that just uploaded the image (or the same form) so that the picture is associated with the post. How can I accomplish this? I've tried the method below and it's not working. Thanks. PHP: `if(isset($_POST['upload'])) { $source = $_FILES['photo']['tmp_name']; $target = "uploaded_images/" . $_FILES['photo']['name']; if(move_uploaded_file($source, $target)) { $pID = $_POST['ID']; $pName = $_POST['pName']; $pCity = $_POST['pCity']; $pDescription = $_POST['pDescription']; $pPhoto = $_FILES['photo']['name']; $pTime = $_POST['pTime']; $pDate = date a1d647c40b`

Chronic kidney disease (CKD) is an increasingly common condition affecting the lives of millions of people worldwide. Many patients diagnosed with CKD require regular monitoring and management. Given that there are many different types of exercise regimens, the role of physical activity and exercise in the management of CKD is a topic of interest for nephrology. A systematic review was performed to determine whether exercise is effective at slowing the progression of CKD, and what type of exercise is the most effective. Articles were searched using MEDLINE, Embase, and Cochrane Databases for studies published from January 1950 to October 2013. The Cochrane Qualitative and Decision Making Groups and the Cochrane Renal Group's Specialised Register were hand searched. Data was extracted from each study by two independent reviewers. Nine studies were identified which examined the effect of physical activity on CKD, with a total of 1174 participants. Six studies showed significant effects on slowing the progression of CKD with varying exercise regimens. All six of these studies showed either improvement in kidney function or slowing of the rate of decline in kidney function. The
