What is AutoCAD? AutoCAD is a drafting and design software which is used for creating 2D and 3D drawings. It is used for architects, civil engineers, and construction designers. The current version is 2016. The AutoCAD 2016 software was started to cater the needs of architects and planners. This means that they can turn the 2D design into 3D view in real time. It was designed to be a complete architecture package. AutoCAD 2019 is currently one of the most widely used design packages and can be used for creating 2D & 3D drawings. There are many applications of AutoCAD. These include architecture, electrical design, and mechanical engineering. AutoCAD users can create detailed drawings for client projects. The drawings can be submitted to manufacturers for projects. The 2D drawings created using AutoCAD can be exported as DWG, DXF, DWF, DGN, and SVG formats. The 3D CAD drawings created using AutoCAD can be exported in STL, VRML, and DAE formats. The 3D models created using AutoCAD can be exported as FBX, OBJ, and JPG files. AutoCAD AutoCAD is a 2D and 3D design software package. There is AutoCAD LT which is used for creating simple 2D drawings. AutoCAD Standard is used for creating more complex 2D drawings. AutoCAD Pro is used for creating 2D & 3D designs. The design package includes the base application plus add-on tools. AutoCAD LT is a simplified version of AutoCAD. It is designed for creating 2D drawings on a computer. It allows users to draw on the screen or print documents. It is a basic CAD tool and is included as part of the AutoCAD and AutoCAD LT subscription. AutoCAD Standard is a comprehensive 2D and 3D design software package. It is used for creating all the 2D and 3D drawings. It is used by architects, engineers, and planners. AutoCAD Standard is included with the AutoCAD software license. AutoCAD Pro is a complete 2D and 3D design software package. It is used for creating all the 2D and 3D drawings. AutoCAD Standard is included with the AutoCAD software license. AutoCAD LT is a

Import the new geometry into Autodesk Autocad. Create a 2D curve with the new geometry. Export the new geometry as 2D/3D.dwg/sld format file. For 3D: Create a 3D surface with the new geometry. Export the new geometry as.dwg/sld format file. About the Autodesk SDK The Autodesk SDK is a collection of open source libraries, developed by Autodesk, that developers can use to create applications that use Autodesk products. The SDK includes libraries that are compatible with the following Autodesk products: Autocad AutoCAD Civil 3D AutoCAD Map 3D AutoCAD Architecture AutoCAD Land Desktop AutoCAD Map 3D Design AutoCAD Environment AutoCAD Mechanical AutoCAD Inventor Revit Architectural Design MEP Other References Category:3D graphics software Category:3D graphics APIs Category:AutodeskQ: How to read a specific url parameter in my routes I have two urls in my web page I need to read the id of each url parameter user_id and item_id (from :id in url). But I have to get it in a specific controller in a specific function, how can I do that? My routes.rb is: post '/page1/page2/:user_id/:item_id', to: 'item#page2' post '/page3/page4/:user_id/:item_id', to: 'item#page4' A: Rails will automatically add the :user_id and :item_id parameters to the end of the path if they aren't explicitly passed in the URL. If you want to use those to populate some database fields in your controller, you can do it like this: my_id = params[:user_id],to_i You can read more about this here:

Speed up the process of creating 2D and 3D design reviews with Automatic Line Markup. Draw a guideline line with your pointer tool and automatically receive a visual review of your work. (video: 1:15 min.) Create a multilayer stacked panel and add marker lines, titles, and frames. (video: 1:00 min.) Easily create reviews that include shapes and surfaces. Draw shapes and handle, then choose which surfaces to include or exclude. Quickly see a visual summary of your work. (video: 1:01 min.) 3D ribbon: Use the ribbon and tools to create 3D ribbons from a subset of your 2D ribbons. (video: 3:15 min.) Create 3D ribbons from multiple lines to create a ribbon from all related 2D ribbons, or from any 2D ribbon and another 2D ribbon. (video: 3:15 min.) Convert an array into a 2D ribbon. (video: 2:12 min.) Zoom into a ribbon to see how different views look, or lock, un-lock, and replace the ribbon. Create a guide on multiple levels for non-horizontal ribbons. (video: 3:15 min.)
