
Unicorn Network Analyzer Crack Free

Unicorn Network Analyzer is a reliable program designed to help you monitor the Ethernet network to which your computer is connected. The software can help you acquire necessary data for network monitoring and troubleshooting. It can instantly generate activity logs and network statistics. Network monitoring, for troubleshooting and security Unicorn Network Analyzer allows you to easily monitor the traffic in an Ethernet network, for troubleshooting purposes. It can capture information packets in real time and conduct a continuous recording process. Thus, you can make use of this advanced tool that can perform network monitoring, protocol analysis, packet decoding and network diagnosis. The software can work in by-pass mode, thus being able to analyze each data packet from a network and send alarms if required. As you open the program, you can immediately start capturing packets, by pressing the 'Start' button. The software then prompts a notification window, indicating the detected adapters and allowing you to select which one you wish to monitor. Record and log network traffic The software can easily record each action that takes place in the network, then mark it in the log. It can indicate the exact time of the movement, the protocol, the source and destination, its severity, as well as display a short description of the event. Additionally, it can create a list of all the packets detected in the monitored network, under several protocols. You may easily filter the protocols, by selecting the ones you wish to monitor and checking the 'Rejection' column for the rest. The list includes protocols such as HTTP, ICMP, DNS, DHCP, IP, NETBIOS, POP 3, SMTP, TCP or UDP. It can also generate events statistic charts, indicating all network intrusion events. Reliable software for network monitoring Unicorn Network Analyzer allows you to observe the network movements, such as data packets, that are being transferred to and from your IP address. The software can record the network activity in a continuous manner, trigger alarms and indicate irregularities. You may thus easily spot intrusions and identify sources. ament-3000/

What's New In?

Unicorn Network Analyzer is a reliable program designed to help you monitor the Ethernet network to which your computer is connected. The software can help you acquire necessary data for network monitoring and troubleshooting. It can instantly generate activity logs and network statistics. Network monitoring, for troubleshooting and security Unicorn Network Analyzer allows you to easily monitor the traffic in an Ethernet network, for troubleshooting purposes. It can capture information packets in real time and conduct a continuous recording process. Thus, you can make use of this advanced tool that can perform network monitoring, protocol analysis, packet decoding and network diagnosis. The software can work in by-pass mode, thus being able to analyze each data packet from a network and send alarms if required. As you open the program, you can immediately start capturing packets, by pressing the 'Start' button. The software then prompts a notification window, indicating the detected adapters and allowing you to select which one you wish to monitor. Recording and logging network traffic The software can easily record each action that takes place in the network, then mark it in the log. It can indicate the exact time of the movement, the protocol, the source and destination, its severity, as well as display a short description of the event. Additionally, it can create a list of all the packets detected in the monitored network, under several protocols. You may easily filter the protocols, by selecting the ones you wish to monitor and checking the 'Rejection' column for the rest. The list includes protocols such as HTTP, ICMP, DNS, DHCP, IP, NETBIOS, POP 3, SMTP, TCP or UDP. It can also generate events statistic charts, indicating all network intrusion events. Reliable software for network monitoring Unicorn Network Analyzer allows you to observe the network movements, such as data packets, that are being transferred to and from your IP address. The software can record the network activity in a continuous manner, trigger alarms and indicate irregularities. You may thus easily spot intrusions and identify sources. Unicorn Network Analyzer Main Features: 'User friendly interface' This is a software package designed to ease the process of monitoring the network. Its toolbars, menus and buttons are clearly indicated, and users can activate or deactivate them to work with the interface in a simple manner. 'Great security' Unicorn Network Analyzer is a very reliable program designed to detect and allow to record network traffic for trouble-shooting and network monitoring purposes. The software can operate by-pass mode, meaning that it can record all data packets being sent or received by any computer in a network. 'Multiple start-up options' Unicorn Network Analyzer offers you

System Requirements:

Minimum: OS: Windows 10 64-bit Processor: Intel Core i3-2100 or AMD FX-8350 Memory: 8 GB RAM Graphics: NVIDIA GeForce GTX 970 or AMD Radeon R9 290 DirectX: Version 11 Storage: 40 GB available space Network: Broadband Internet connection Recommended: Processor: Intel Core i5-3570K or AMD FX-8350 Memory: 12 GB RAM Graphics: NVIDIA
