The Autodesk Exchange Appstore is also where Autodesk's Viewer was published. History AutoCAD was released to manufacturing in 1987 as AutoCAD from Autodesk. It replaced some of the capabilities that AutoCAD had introduced, such as code formatting, procedural languages and the ability to work with drawings that are stored in a database. AutoCAD was originally written in AutoLISP for the Macintosh. Later versions were written in Visual Basic, Microsoft Visual C, and the later release of the ObjectARX software. AutoLISP disappeared from AutoCAD in version 15 of AutoCAD LT, with the Mac version remaining. The first releases of AutoCAD for DOS (version 2.0) were for x86 based machines. A version for the Atari ST (version 2.0) was also released. During the late 1980s, AutoCAD was acquired by Autodesk, Inc. and developed into a comprehensive suite of products. In the early 1990s, the name Autodesk was introduced to expand the scope of the company from CAD software to 3D modeling, animations, and web publishing. In 1994, the name was changed to AutoCAD. This was accompanied by a new user interface and a re-organization of the suite of software products. In November 1995, Autodesk released AutoCAD Version 3.0, the first release with a true Windows interface and object-oriented (OO) programming, Visual Basic for Application (VBA) and AutoLISP programming support. AutoLISP support

was removed from Autodesk CAD in version 5.0. AutoLISP support was subsequently removed from AutoCAD LT in version 6.0. The drawing capabilities were expanded with AutoCAD 2003, released in September 2004. AutoCAD was introduced for Microsoft Windows on the first PC computers with Intel Pentium II and above. An option to record one's own animations and animations for study were also added to AutoCAD. AutoCAD 2010 AutoCAD 2010 was released for both Windows and Macintosh. It was the first release of AutoCAD on Microsoft Windows since version 4.5. AutoCAD 2010 is the first version to be developed on the DXF protocol. AutoCAD 2010 introduced "AutoCAD Architecture", designed to bridge the gap between the architectural design process and the CAD process. AutoCAD 2010 was a1d647c40b
