One type of fish you probably haven't heard of is the Alepo galaxias, but this is about to change. The Alepo galaxias is an olive-sized fish native to the Pacific Ocean off the coast of Northern Africa. There are only about 30 populations of this fish, and only 7 of those are fully wild. With fishing boats and aquaculture operations targeting the fish for their delicious roe, it is a very easy fish to overharvest. The roe is also a highly sought after delicacy in the Mediterranean. At present, wild populations are being fished too heavily, and this is threatening the whole population. While the fish is more common on the north African coast, it was recently spotted on the Mediterranean. It was filmed on a fishing trip in Croatia in October 2018. Video footage shows the fish swimming in the open sea along the coast. While rare, it has been seen before. A juvenile fish was caught off the coast of Tunisia in 2012. The roe from that fish was reportedly valued at \$50,000. The fish was eventually released. The only other occurrences have been on the north African coast and in the

### What's New In BarcodeFiler?

BarcodeFiler is a helpful application for splitting and renaming image files into individual items, a.k.a., barcodes. It automatically detects barcodes in image formats like JPG, TIFF, and PDF, then extracts and splits them into other images, which are named to categorize the items. The app also allows for barcode (EAN/UPC) exclusion, pattern creation, and type recognition. The interface consists of a simple, two-step wizard for easy use and configuration, and simple, minimalist UI. The application can split and rename multiple files at a time, and can produce output files in TIFF, PDF, and JPG. A new option called "hidden mode" is also supported for powerful usage without user interaction. Split BAR codes quickly and easily in less than a second. Barcode splitting is a difficult, time-consuming process that requires the use of many 3rd party applications. Now you don't have to split your barcodes in thousands of images. Just add barcodes to images and BarcodeFiler will automatically split and rename them. To get started just press Split. With BarcodeFiler you can: Split and rename multiple files in less than a second. Filter the type of barcode you want to split. Filter the barcode by numbers, type and/or pattern. Barcode type recognition: JPEG/JPG - TIFF - PDF - PNG - GIF You can set a pattern for barcodes in the following: 1 - 999 \*000 - 9999 \*0000 - 99999 \*00000 - 999999 \*000000 - 9999999 \*0000000 - 99999999 \*00000000 - 999999999 \*000000000 You can also make a list of barcodes, set the number of digits in the barcode, the type of barcode (UPCEAN or EAN) and the type of the end of the barcode (blank, underscore, dash, period). Pattern recognition: You can specify the number of digits in a barcode, the type of barcode (UPCEAN or EAN) and the type of the end of the barcode (blank, underscore, dash, period) and you will get the list of recognized barcodes. \*\* If you make an error, you can edit the barcode in a preview window and continue. Pattern searching: Barcodes (upc or ean) can be searched in the list of patterns, where you can specify the number of digits, the type of barcode (upc or ean) and the type of the end of the barcode (blank, underscore, dash, period). Barcodes (upc or ean) can be searched in
