Marketing AutoCAD is marketed under the motto "The world's leading 2D and 3D CAD system." Some online marketing of the software claims that it is "the most used 2D CAD software on the planet". Some experts disagree, however, citing that CAD software, like other computer applications, is only useful to those who need it. The AutoCAD version number indicates the year of release for both the 2D and 3D features. The number has been used as a marketing tool since the first version of AutoCAD: V19.0, which was released in the year 1983. Awards AutoCAD is generally credited as the world's best-selling CAD system. In the late 1990s and early 2000s, this position was challenged by MicroStation, but AutoCAD regained the crown in the mid-2000s. For example, in 2005 CAD magazine rated AutoCAD 2010 "Best Product of the Year". AutoCAD is also a five-time CAD magazine Readers' Choice Award winner, as well as a Product Innovation of the Year Award winner. History Origin The AutoCAD tradition begins in 1978 with the introduction of the LaserCAD program. LaserCAD, which was developed by Corian Computer Systems, Inc. was acquired by Autodesk in June 1989. In 1982, Autodesk released AutoCAD, which was a combination of LaserCAD and a new line of engineering tools called AutoLISP. Release history These release dates were determined by Autodesk using data from its internal Metrix market research system (the purpose of which is not publicly disclosed), and have been viewed by some as inaccurate. Feature development and version history For information on the evolution of each of AutoCAD's versions, see the Release History section of the AutoCAD online help. Autodesk discontinued development of AutoCAD 2007 in June 2007. The latest official release is AutoCAD 2010. Licensing The majority of the AutoCAD program and its source code is free of charge and available to anyone. Autodesk offers a number of other products under license for a fee. Autodesk provides a subscription-based product called AutoCAD 360 (formerly called AutoCAD Architecture), which allows users to access cloud-based CAD assets that can be used for free, as well as access to web-based programming and collaboration tools and features
