Site characteristics AutoCAD's code base is written in C++. The two main languages used for  
 development are the C++ programming language and C#, a variant of the C++  
 programming language developed by Microsoft. AutoCAD has a large group of developers  
 who are dedicated to the product's support and software updates. In addition, the software is  
 capable of being upgraded through the use of a third party product called Application  
 Delivery Manager, which is used to create packages for the software. These packages include  
 both new releases of the software as well as bug fixes and other improvements. Version
