History AutoCAD started as a project from the Engineering and Development group at I.D. Systems, now Autodesk, in Palo Alto, California in 1979. The project was named AutoCAD (Automatic Computer-Aided Drafting). The team working on the project was led by Steven J. Erdos and David M. McFadden. Erdos and McFadden were influenced by the MIT CAD group's work and experiments with computer-aided drafting during the late 1970s. Another key influence was Douglas E. Ingalls, who at the time was leading a team developing a high-speed vector graphics system on the IBM 370 mainframe computer. The initial AutoCAD system was based on Ingalls' in-house high-speed vector graphics hardware and was aimed at applications in product design. The project was spun off as an independent company, called I.D. Systems, Inc. in 1981. In 1981, Autodesk introduced AutoCAD II, which was the first commercially available computer-aided design system to have a built-in drafting engine. AutoCAD II required a Mac Plus or later computer with a graphics subsystem compatible with Apple II or Commodore PET graphing terminals. The first version of AutoCAD II supported only vector graphics and only filled the area between points on a path. It was not possible to draw free-form shapes and objects. In 1982, I.D. Systems released AutoCAD, which ran on IBM mainframes and included support for non-vector graphics drawing. AutoCAD included many new features, including additional 2D drawing commands, the ability to draw free-form objects and text, and a system for managing drawings. AutoCAD introduced many concepts that would become industry standards for later CAD programs, such as the ability to save files in a hierarchical

directory structure. In 1985, Autodesk released AutoCAD LT, which was a version of AutoCAD aimed at non-professional CAD users. It was the first vector graphics CAD program to run on Windows-compatible personal computers. The user interface of AutoCAD LT was similar to that of Apple Computer's AppleWorks word processor. In 1992, Autodesk launched AutoCAD 2000, which supported Macintosh computers and was a milestone in the history of CAD, introducing full-featured 2D drafting and 3D modeling. In 1998, Autodesk released AutoCAD 2004, which

CONSULTATION Expert Roadway and Traffic Planning and Design Making the Road Safe With over 25 years of experience, ESG is the premier consulting firm for roadway and traffic planning and design services in San Diego and Southern California. Our objective is to help you maximize the public benefits of traffic planning and design to ensure the safety and efficiency of your transportation systems. We design roadway systems that work well for everyone, and we have the experience and resources to anticipate and solve problems before they happen. That means you don't have to worry about traffic impacts, project delays, or budget overruns when you entrust us to help you build and manage your roadway systems. Our Firm ESG is a small company and we like it that way. The founders know the issues facing public agencies from both sides of the table: as local government officials and as the entities who need to design our roads. This gives us a unique insight into the kinds of issues and interests that keep our city and county officials awake at night, as well as an intimate understanding of the processes and politics that make public agencies act in the public interest. From there, we can quickly assemble a team of industry- and government-recognized specialists to assemble the best approach to your roadway problems. ESG has a unique perspective on how traffic flows through our communities. The firm has successfully managed thousands of projects, many of them with unique complexities. This experience, along with our collective abilities and years of professional development, has given us the tools to work hand in hand with you to design the best possible roadway system for your community. Our company culture is one of hard work and mutual respect. We are passionate about what we do and we have tremendous respect for our colleagues. It's what we do and who we are, and we put it into every project we touch. This kind of talent and dedication is what enables us to be leaders in the field of
