Print from your design to a connected device, such as a tablet or smartphone. With the “Print” command, you can now directly print from your design to your own printer, eliminating the need to manually print to a PDF first. (video: 1:19 min.) Improvements to existing settings, including for angles, and more. (video: 1:39 min.) Automatic production of drawings from your CAD models. When you add a feature, symbol, or line to your model, the “Add Parts” command automatically creates a drawing from your model for the new item. This process is faster than it was before. It is especially useful when working with large model-based designs. (video: 1:18 min.) Improvements to existing settings, including for animations, and more. (video: 1:25 min.) Drawing Components Drawing Components can be used to attach additional blocks or features to existing blocks in your drawings. They are similar to AutoCAD’s dynamic blocks, but they’re designed for the purpose of adding additional features or annotations to your drawings. Drawing Components can be attached to: Geometric objects. These objects include features, blocks, lines, and text styles. Layers. Layer styles are included in this category. Text Styles. Text styles are included in this category. Objects of Classes. Classes contain a collection of properties and parameters. Attribute Symbols. Attribute symbols can be used to attach additional properties to existing attributes. Support for Java and .NET plugins has been added. See the video below for a demonstration. See

the AutoCAD blog for a list of the new drawing components and for a walk-through of how to use them. Automatic Properties and Attributes Properties and attributes can now be automatically defined for you when drawing. You can set a default value, and then later change the default, or you can automatically create properties for more complex drawing and modeling tasks. Auto-Properties and Auto-Attributes can be created using the “Properties and Attributes” command in the command line, the GUI, or via the Add Block/Layers/Drawing Components menu. (Auto-Properties and Auto-Attributes can also be defined from the Drawing Center menu.) Auto-Properties and Auto-Attributes can be
