I need to get the result like: Any Help? A: In addition to using `split()`, you should also combine the three lists into one data frame first: `for (i in 1:nrow(output.df)) { output.df$IDs[i]` There are several hormonal mechanisms regulating body weight, including neuromodulators such as ghrelin, angiotensin, and others. Recently, some peptides such as leptin and adiponectin have been identified as adipose-derived hormones and their concentrations have been shown to be directly related to the amount of body fat, thus acting as markers for the development of obesity and type 2 diabetes, and they may also play key roles in these diseases ([@r1],[@r2]). Unlike other adipose-derived hormones, liraglut
