9/30/2014 . Deluxe Cracked Game For pc. Buy & Download Dynamite Deluxe for PC from direct download link above (1.21 GB). You can also get this game on Google Drive. If you want to start .Q: Dividing the sums of two columns when the corresponding IDs are equal I have a dataset that is structured as shown below (I've removed the actual column names to make it more readable):

```
df1 = pd.DataFrame({'fk_id':['a','b','c','d'], 'fk_df1_id':['1','2','3','4'], 'fk_df2_id':['a','b','c','d'], 'sum_df1':[3,2,4,3], 'sum_df2':[1,3,2,1]})
```

I would like to divide the sums of the respective columns when the corresponding IDs are equal. In this case the desired output for df1 is

sum_df2	fk_id	fk_df1_id	fk_df2_id	sum_df1
0	a	1	a	3
1	b	2	b	2
2	c	3	c	4
3	d	4	d	3

The calculations should be inverses of each other for both columns.

I encountered a scenario where an application I am working on was failing and I identified this behaviour as the cause. Lets assume we have a List myList;. If you serialize this using the following code: `StringWriter stringWriter = new StringWriter();`
