Hello, Just wanted to share with you guys some feedback I've received on the game and the review on the store. I've got it all sorted out now and the game is still in the top selling games list, no bugs for a bit of while since the last patch. I took a look at the reviews and it's people who are unhappy with the decision to change some aspects of the gameplay and the story. This sounds well and good, but you've said that you won't look into it, so why did you do that? This is what makes me wonder about the store's credibility, no one can review content for game's which haven't been released yet. So to sum it up, so that other reviewers might understand the situation: - The development of Elden Ring started in 2016. The game was originally a Windows only game. - When CoHCE changed to the GUM model, the development of the game was started. It worked on the laptop but not on a tablet. This meant that some parts of the game were useless on tablets. So then the idea was created to release it as a Windows and Linux game. - The game was almost ready to release in the beginning of 2017, the Windows version was almost done. - Around the same time the Linux version was started. - An Android version was started but never completed. - Around 2-3 months later I realized that the tablet version was pretty much a mess, it wouldn't run on a tablet without problems, so I quickly started working on the Windows version, but the Linux version was working fine and stable. - Around a week later I realized that a change that had been made on the Windows version also had a bug on the Linux version, so I quickly made a new build and sent it off to the Linux team. - On a Sunday, while the Linux team was busy with preparing the pre-release party for the upcoming release, I realized that the game has done its annual update and that a brand new build had been created. So I quickly had to send an updated build off to them. - Around the same time I found a bug in the Android version, which I promptly resolved. But it was too late, the pre-release party had already started. And the Linux version on their computers wasn't working on their computers at all anymore, I had to wait for the Linux team to get things back on track bff6bb2d33
