## What's new in Elden Ring:

This game does not require the purchase of additional CGs in order to run. [What is the difference between "Online Multiplayer" and the "Asynchronous Online"?] - The "Online Multiplayer" lets you create your own customized online characters and confront opponents from all over the world through a randomized server. - The "Asynchronous Online" is an online element for social games; it doesn't offer any unique elements compared with the normal "Singleplayer Online." You can play any of the other online games with your Asynchronous Online character while your H.E.R.T. works.

[What is the difference between "Manual" and "Automatic"?] - "Manual" is a method that allows you to control the rotation of your character's helmet in relation to your avatar. - "Automatic" is a method where your character's motion is automatically controlled. In other words, once you've entered a particular location in the story, H.E.R.T. automatically rotates your character's helmet until your next movement is assigned. This also applies to the "Automatic Exploration" method, which controls your characters exploration when the player character goes out of the map.
