In addition, EA Sports has made advancements across the “Physics” and “Characteristics” in-game elements in FIFA 22. Improvements have been made to the Player Impact Engine to make passing more natural and effective, and players react differently during different game situations. Additionally, FIFA 22 introduces “Take Over,” which allows players to lead a new league following an in-game retirement. In Total War: WARHAMMER II, players will begin the game as a new Hero (gaining new and improved traits) and then, as they play their way to glory as they level up, face the challenge of life after the Hero and as they take command of a new realm. FIFA 22 will be available for PlayStation 4, Xbox One, and PC via Origin in late August.. No. 5,440,010 to J. W. Walters et al. teaches a waveguide system which splits the light in two paths, one path being directed into a small groove on a flat high reflective surface, and the other path being directed into a vertical diffraction grating which is directly behind the flat surface. A 45.degree. mirror and a polarizer are positioned to allow transmission of the light through the first and the second paths into a single mode fiber. A significant problem that plagues both transmission and reflection systems is the inherent loss of light. The light traverses the optical device, and is subjected to certain losses associated with the basic and associated optics. The coupling efficiency of a TIR system, in which the light beam is incident on a planar interface between a first and a second media, depends on the angle of incidence, the transmission coefficient and the reflectivity of the first medium. The Fresnel equations show that at any angle of incidence light is reflected at a reflection coefficient of  $\rho_{\theta} = 1 - \beta \cos \theta$  where  $\beta$  is the Fresnel coefficient for the media,  $\theta$  is the angle of incidence, and is defined as the angle between the plane of incidence and the plane of reflection. If the angle of incidence is increased so that the beam is incident on the interface between a first medium and a second medium at a sufficiently small angle,  $\theta$ , of less than a critical angle, the light is totally internally reflected. The critical angle is defined in this context as the angle where the transmission coefficient of the first medium is equal to the
