### **Fifa 22 Features Key:**

- Passing and shooting get a massive upgrade with new dribbling, more intelligent off-the-ball action, and at-speed-dribbling (including a variation that plays out like a crossover) all making it easier to score. The new dribbling system also lets players use their hips to turn, so dribbling becomes even more about intelligent running and taking advantage of the space around you.
- Counter-attack makes a powerful return, and provides a fresh angle to attack on the break or open up gaps to run at defenders. The AI also gets smarter, making it harder for players to accidentally give away the ball and making the world’s best players all look like world-beaters.

- 
- New ball physics deliver new options. Players can now tackle during the second part of a controlled dribble, and the new 'turn inside' and 'turn outside' dribbles make it feel like you have more choice in how you use the ball.
  - Creative moves such as Dodge Hoops and Pro Tackles provide the ability to creatively beat the best defenders in the Premier League.
  - Intelligent settings that let you dial in the game for different needs. You can raise defensive pressure, make the player more convincing, or turn on free kicks from the open play system to make it easier to score.

Do we need more evidence of the relationship between passive smoking and schizophrenia? An observational case-control study in Nepal. Schizophrenia is a well-known disorder linked to a variety of environmental and genetic factors. Epidemiological studies have revealed the effect of passive smoking on schizophrenia, and this is also reflected in the conceptualisation of the disease. However, such studies have not been conducted in Nepal. The aim of the study was to examine the association between passive smoking and schizophrenia in Bhaktapur, Nepal. This study was conducted from August to November 2015, in two study sites, including three hospitals from Bhaktapur District and six from Lalitpur District. In total, 300 patients with schizophrenia were included in this study (58.33 % males, 95 % Hindu). Only passive smoking (smoked by others) was measured among all exposure variables. All data were collected via an interview using a validated questionnaire. Unadjusted and adjusted odds ratios (OR) were calculated to assess the association between passive smoking and schizophrenia. Of the 300 included patients, 55.33 % (n = 171) were smokers. The prevalence of passive smoking was 31.67 % (n = 92).
