- Simple and intuitive user interface - Control of a broad range of equipment from a single interface (videogames, projectors, screens, speakers, etc.) - Runs on Mac OS X (10.5+) and Windows XP - Uses a fully event-driven system and therefore requires little system resources - Fully synchronized with the audio system - Audio

control via the MultiMediaCard-Standard - Robust design even under heavy load - Supports a wide range of sound cards and relay boards - Supports a comprehensive HELP system - Installation as Application for Mac OS X / Windows XP - Command line interface for non-GUI applications TagPro is a simple Tag-Editor that works in a similar way to the software TAGLIB. The intuitive graphical user interface allows you to easily create your own data tags with a single mouse-click and to edit existing tags with a

few mouse-clicks as well. The program is very easy to use and is fast at creating and editing tags. The application comes with a complete set of default tags. Because TagPro is a tag-editor, it does not allow you to directly edit files in the TagLib-Format. However, the application is able to read and write TagLib-Tags from and to *.ttl-Tags with a few mouse-clicks. D-View Studio 2.0 is a multi-tasking image viewer with a wide selection of enhanced features that makes it a powerful imaging application.

With D-View Studio 2.0, you can edit, organize and edit all kinds of images in a creative way.

Whether it is a scanned document, a photo, an image or a sketch, with D-View Studio 2.0 you can perform all necessary image adjustments. The application supports three alternative image size formats and offers advanced options to create graphics. Whether you need to manage or edit the RAW-format, D-View Studio 2.0 also supports many other image formats. AviSynth is a non-linear video editing software

using the Avidemux toolkit as an engine. It's designed to be easy to use and its powerful features provide a fully featured non-linear video editor. The application has been designed to directly drive the framegrabber cards of a number of video recording devices and many additional effects can be used, such as chroma keying and general video manipulation. A number of effect-groups are available which can be combined via plug-ins. b7e8fdf5c8

Licht 24 Pro is an easy-to-use piece of software that provides users with the possibility to easily control relay boards and IO cards directly from their computers. The application has been designed with support for a broad range of relay boards and arbitrary equipment, which makes it suitable for discos, stages, and even home automation. It makes it easy for users to control multiple appliances at the same time from a single interface. The

program includes switches for ON/OFF-operations (Status-LEDs), emergency-stop-functions, and the possibility to set up automatic timers to switch on or off various appliances at particular times of day. Licht 24 Pro also allows users to control the next clock impulse via music, with each beat being transformed into a clock impulse. Users only need to plug a music signal to the LINE-IN port in their sound card. Users can take advantage of this application's capabilities via command line parameters and

can also send these parameters as messages (WMCopyData) to Licht 24 Pro. There is also a counter function that allows users to count every high switch for every channel. Additionally, the software comes with and Impulse-mode that makes it easy for users to control notching relays by issuing only short impulses on the respective outputs. However, users can control the pulse length for each channel. How it works: Licht 24 Pro connects to all relay boards and external equipments by means of the

provided drivers and is able to change the switch status as well as output the high signal for individual relays. The user interface is implemented using standard Windows graphical user interface elements and is available in English, French, and German. Key features of Licht 24 Pro: Technical support by e-mail; Linux and Windows operation, binary file for each user; Impulse, stop and DAP mode for switch and relay control; Directly connect to various RS232-based relays; Functions for control of relays

for classical and electronic music; Instant lighting switching; Counter; Command line parameters; Haptic mode for the control of switching relays; LED and sound cueing; Windows application is completely silent. What's New in the Licht 24 Pro?

The app is a feature-rich piece of software that provides users with the possibilities to control lineboards and IO cards with an online connection. There is no need to learn special control commands, because the software can be operated with the mouse and keyboard. Advanced users can send signals and set properties in the form of WMC-messages. The program enables the easy, direct and online control of up to 100 ON/OFF-switches and controls, each with their own status-LEDs and impulse-

functions. One can also monitor the current status of all ON/OFF-switches via the app. The program also contains at least one counter that can be used to count each rise of a switch, i.e. each clock pulse on one channel. Opticalexchange1 is a powerful remote desktop software that provides the user with the possibility to control various devices, including televisions, speakers, projectors, game consoles, PCs, network/switch devices. This program incorporates remote controls that have been

configured to change the settings of various devices, and projects the remote control imagery to the device. The user can change the volume and mute the device directly from their PC. The Remote Desktop software offers the user the possibility to connect to any of their Windows (Vista or XP) Remote Desktop sessions with the Remote Desktop Wizard. The user is then given the option to connect to the particular session. The Remote Desktop Software also offers the user the possibility to

choose a list of devices that they want to control. And with this setup it is easy to control. The remote controller can be configured by the user so that the selected controller sends appropriate requests via cable to the various devices being controlled. The software is an advanced command-line based messaging, voice, and video program. It is easy to use, supports multi-user, and runs on Windows 95, 98, NT, 2000, XP, and Vista. The software supports telnet, SMTP, POP3, IRC (Internet Relay Chat) for

sending/receiving messages, VoIP (Voice over Internet Protocol), and SIP (Session Initiation Protocol) for sending/receiving voice and video. The software allows users to configure their computer to accept incoming calls and receive their own video and voice messages, as well as manipulate incoming messages and take control of the call.
