architecture principle that was the base for WPF, and probably Silverlight. MVVM is a common methodology for building an XAML-based application. The MVVM pattern is a functional architectural design principle that promotes loose coupling of the model and view(s) of an application's data. MVVM starts by "mapping" every domain object to a ViewModel object. Here, the ViewModel is a "layer" between the View and the Model. The Model is the domain object you're normally working with. So, you have two classes in your application: the Model and the ViewModel. In an MVVM application, the Model is never directly bound to the View, and the ViewModel is never directly
