Correcting color problems Photoshop allows you to change or correct colors in images. Whether the colors are too similar, too different, too warm or too cool, or are dull or bright, you can often use the Color panel to fix the problem. The Color panel is shown in Figure 3-12. You may notice that the Color panel is divided into different color categories, such as sky, foliage, and skin, and there are different ways to identify a color. Figure 3-12. The Color panel helps you fine-tune your pictures. Choose a color category and click the box to display the available color swatches. You can select colors using the eyedropper tool (or Colors panel box on the right) by clicking

and dragging.

More detailed tutorials about the beginner's steps to get started on using Photoshop are available here. Pros Convenient and easy to use. It has more than 50 main tools. A good place to start when you have almost no experience with image editing. Cons Price. No layers. We'll discuss the different features of the program to help you navigate the toolbars and menus and understand how to perform common tasks. Let's start our journey in Photoshop and dive in! Creating basic layers To start with Photoshop, you need a blank canvas. You can create a new document by opening an

image, choosing “Photoshop” from the “File” menu and then choosing “New.” A new document is a blank page, so you can start by drawing some shapes and text. Newer versions of Photoshop have a “graphic” tab, which is excellent for beginners. To start the process, open the “graphic” tab, or type “graphic” into the search box. You can drag shapes or text. You can also use the arrows to move these elements around. Some of Photoshop’s layers can be complicated, so you can decide to make some of them automatically. To do this, choose “Layers” from the main menu, or click the tool from the main toolbar. To activate this option, choose “Create a New Layer” from the sidebar menu (the menu that appears when you click the “Arrows” and

“eye” icons). To create a new layer, choose “Layer” from the toolbar’s “New” menu. To delete a layer, choose “Layer” from the toolbar’s “New” menu and then choose the “Delete Layer” option. The other way to add a new layer is to go to the left side of the document and choose “Layer” from the sidebar menu. In the next tutorial, we’ll cover editing the shape/text of a layer. Basic image editing If you select an image, you’ll immediately be in the Image menu, the main menu for editing. Here you can choose to edit the 05a79cecff

Q: I want to run a shell script at the end of my bash script I am trying to run a shell script at the end of my bash script but it's not working. Reason : I am launching my script from another script. Source Script

```
#!/bin/sh function my_function { export PASSWORD=`cat /root/testpwd.txt`  
/home/centos/bin/test.sh echo "This script got executed!!!" } my_function  
My bash script  
#!/bin/bash function my_function { export PASSWORD=`cat /root/testpwd.txt`  
/home/centos/bin/test.sh echo "This script got executed!!!" }  
my_function  
bash -x script.sh + my_function + my_function + /home/centos/bin/test.sh  
This script got executed!!! + echo "This script got
```

executed!!!" + echo "This script got executed!!!" A: Running it from a subshell (using the { } in the function definition) is what the documentation suggests: As the shell treats functions as procedures, you can run the body in a subshell: \$ a () { echo before; sleep 1; echo after; } \$ { a; } before after \$ So in your case, you would get: #!/bin/sh
function my_function { export
PASSWORD=`cat /root/testpwd.txt`
/home/centos/bin/test.sh echo "This script got executed!!!" } my_function I strongly recommend using bash for a shell rather than using a separate sh script. Long before “Black women, we need you more than ever” became a hashtag, the sentiment was clear: Farrow needed black women. And it wasn’t just because she

was a likable actress, which she was. Being a black woman is about having a voice and not feeling unheard and unheard of. And it's about making money — white women make less money on screen than black women do, according to the Center for the

Production of the diffusible agrobacterium factor acetosyringone. The agrobacterium factor (AF) that mediates the intercellular spread of *Agrobacterium tumefaciens* is a diffusible substance which is necessary for tumour formation. Two methods have been used to produce and identify AF. Both methods have proved successful; however, they have the

potential to generate different AFs. The first method used in the present work is based on the observation that AF is generated when *A. tumefaciens* cells are incubated for more than 30 min in a medium containing acetosyringone (AS), a derivative of syringic acid. When *A. tumefaciens* bacteria are incubated in a culture medium containing AS, they secrete an agrobacterial factor called AF which can be detected using an ELISA. The second method, developed during our studies on the effect of AS on the stability of CFU of *A. tumefaciens*, depends on the ability of AS to induce the synthesis of chorismic acid (CA) in *A. tumefaciens*. Chromosomal DNA from *A. tumefaciens* cells is extracted, labelled with radioactive and autoradiographic

methods, and separated by electrophoresis. The results show that AS induces the transcription of a gene, presumably belonging to the CA synthesis operon, which leads to an increase in the content of CA in cell wall. This effect is due to activation of a promoter or to the induction of transcription from an already produced RNA polymerase.

Kim Jong Un readies for a possible nuclear showdown.

North Korean dictator Kim Jong Un is ready for a possible nuclear showdown with the Trump administration, according to a Chinese report. The state-run Global Times reported Thursday that North Korean weapons development is accelerating in response to new U.S. sanctions. North Korea conducted its sixth underground nuclear test in September

and has been threatening additional tests while continuing its nuclear and missile development. The Global Times noted that Pyongyang made "rash" moves toward its goal of a nuclear-capable intercontinental ballistic missile. In November, U.S. defense officials told NBC News that North Korea has likely mastered the technology needed to detonate a hydrogen bomb that could be loaded on a long-range missile. The officials warned, however, that it might take some years to prepare a long-range missile that could deliver a nuclear warhead to the U.S. mainland.
