F-Script, a software scripting environment which can be used to automate AutoCAD commands and perform programming tasks. The C++ Automation API allows the creation of extensions to AutoCAD. It is available in all versions of AutoCAD up to and including AutoCAD 2018. AutoCAD C++ extensions can be written using any programming language (e.g., C, C++,.NET, Delphi, Visual Basic, Lisp, Smalltalk, etc.), but one must be available at the time of writing code. Acceleration The AutoCAD system is multi-threaded, but it is architected to permit adding further threads to it, as well as using threads for multitasking and as event threads. The system is also designed to permit expanding on it, with new capabilities being added over time. One of the main features of AutoCAD is its performance. The speed of AutoCAD's 3D objects is comparable to other leading CAD packages. Many attribute this to AutoCAD's use of Direct3D graphics. The system is also able to render billions of geometric shapes per second, making it very efficient for complex drawings. Part of the speed of AutoCAD's 3D objects comes from its use of "BSP trees". This is a method of storing all objects in a tree, rather than a linear array. This gives a significant performance advantage over other methods. Improve the user experience and streamline the feedback process. View and annotate drawing objects using our new method of annotation which is both easier to use and saves more disk space. (video: 1:26 min.) The new Search command contains the same search options as AutoCAD LT (next topic). (video: 1:43 min.) Manage complex annotations in a clean environment, including dimensioning, text and drawing references. Combine multiple annotation types to achieve a one-stop solution for your most complex annotation needs. Use a dimensioned annotation and coordinate it with text reference to guide your work or make existing text legible. (video: 2:09 min.) Organize your annotations using layers to simplify your drawing process. Layer annotations in AutoCAD 2023 and view them at any time in the Layer Notes window. Note layers are "flat" layers and can be combined with annotations. If you change a layer while drawing, all associated annotations update as a group. (video: 2:45 min.) You can also use layers to view and select annotation objects. Annotations are selected in layers in a similar way to symbols, such as the US Letter layer and US Legal layer. Select the desired layer from the Layer List to view and edit all annotations. Selecting an annotation with the Select command also selects that object in all layers. (video: 3:41 min.) To make your work easier, the Navigation pane displays a pop-up list of available layers. (video: 3:25 min.) Save Space and Time with Parallel Coordinates: Add and edit parallel coordinates in an interactive way using DPI. Display a DPI-independent display of the parallel coordinates and place multiple coordinates on the same axes. Use the equation editor to create complex equations, or display parameters of the parallel coordinates. (video: 3:36 min.) Enhance Your Existing Parallel Coordinates: Join more than two coordinates to create a new coordinate that shows the value of all the coordinates. Extend existing parallel coordinates and keep the existing axes information. Compress and resize and visualize the coordinates. (video: 2:41 min.) Draw More Efficient Traces: Create traces with multiple point and line characteristics. Use negative and positive numbers to create a series of points or lines that have increasing or decreasing values. Apply as much, or as little information as desired. Use draw
