Chroma — which adjusts the colors in an image, making some colors lighter or darker. Screen — which "zooms" an image into a miniature view of the image. HSL — which adjusts the colors in an image to highlight one particular color. Multiply — which increases or decreases the brightness of pixels in an image. Sand — which blurs an image. Blur — which adds a soft blur to an image. The Lasso tool is one of the most basic tools in Photoshop, as it helps to isolate areas of the image and make edits to the pixels in those areas. It can be used for many different effects, including: The Pencil tool allows you to make your own brush and use it on other images. The only limitation to this tool is that you can only use it for a single image at a time. Tools like the Pencil tool will often fill in blank areas of an image, adding pixels in various ways. This can be useful for painting or retouching, or removing unwanted elements from the image. The Clone Stamp tool allows you to copy pixels from a different area of an image and paste them into another area. This is useful for repairing or correcting a damaged or corrupt image. The Healing Brush tool is similar to the Clone Stamp, as it allows you to copy pixels from one area of an image and paste them into another. The major difference between the two is that the Healing Brush can repair and fix any damage to an image. The Eraser tool allows you to remove pixels from an image. You can choose the size and shape of the brush.
