History In 1982, John Knoll started programming the first version of Photoshop. At the time, it was the first vector image editing program available. Steve Jobs, a colleague of Knoll at Pixar, saw a preview of the program and requested a copy. Knoll subsequently began to market it to Adobe Systems. As the company gained recognition as a graphics and publishing company in its own right, the company changed its name to Adobe Systems Incorporated, and the product was renamed Photoshop. Features Adobe Photoshop is a computer program that allows image editing. It is the most powerful image editor software in the world. It features a versatile manipulation toolkit, vector tools, color management features and

supports a wide range of file and media formats. Photoshop is a bitmap editor that uses layers that act as units for a photo or artwork to be composed and manipulated. There are two types of layers: a background layer (also known as a "canvas" layer), and the layers underneath. Background layers cannot be deleted, but any layers can be individually moved, rotated, resized and recolored.

The software supports many forms of filters, however, most are now in the form of plug-ins. Filters, and even custom tools, can be saved for later use. Flattening the images One of the most useful functions of the tool is the ability to flatten images. That is, to combine all layers into a single document. To do this, either press Ctrl-T (Windows) or Command-T (Macintosh), or go to Layer → Flatten Layers. Each layer inside an image is its own vector shape. Layers can be combined, or flattened, by adding them to a canvas or background layer. This is sometimes referred to as "layering" an image. In addition, each layer can contain a mix of both vector and raster (bitmap)

elements. Photoshop Layers When using Photoshop, the layers behave as a set of transparent overlays on top of each other, each containing different elements. Normally these elements are raster (bitmap) images and paths. However, text and other elements like freehand, bezier, and polygonal shapes (polylines) can be used as well. When you flatten an image, these elements are combined into a single layer, and you can edit the layer as you see fit. There are a total of

Hi Dear Friends! I'm so sorry to post this message a few days later than it should have been posted, but I'm currently in an emergency care facility due to a broken leg (which is feeling much better now).

Basically, when I was done for the day, I walked into the cabin and without putting weight on it, it snapped in 2 places. As you can imagine, it wasn't pretty. Plus, I was extremely cold and wet from the rain, so I had a heater going in the room to keep myself warm. Also, I had some surgery scheduled for tomorrow to get a broken collarbone set. And I'm currently sharing a dorm with a beautiful greek chick. Plus, it was one of my best friends birthday, so it was a fun time. It was an interesting week.

About the writing; I wrote this before being written (as usual) into the reality show "My 600-lb Life", as I had been writing and editing my book for some time now, but I had been in semi-retirement since the season 2 of "A&E's" "Weight Watchers" had

just wrapped. I started back at it, but my break really helped me just become healthier, as I had to gain a lot of weight during the filming of my second season of “A&E’s” Weight Watchers. So, a month after it wrapped I was writing, editing, and writing more. Last week, while I was in the hospital, I finished the actual editing and sent it to the publishers, so I’ll have a final draft of the book next month, and then I’m guessing my debut on Amazon Kindle will happen next year. About my Mom; she’s doing good, but she still can’t come home yet, as she’s home now in a wheelchair as she’s still in pain from her own surgery. She’s had an entirely new lower spine, from her pelvis to her lower legs, and it was a huge and complicated surgery. Plus, she also had a central line inserted to replace her port (she has Hep C) and had a new bile duct stent inserted. She’s been in constant pain, but her surgery was successful and they removed 90% of her tumor. While she’s in the hospital, she does

Q: Why does this solution for minimum spanning tree problem look exponential? I came across this problem: Let the following problem: the vertices of a graph G is V , and the weights of the edges are given as E . We want to find a spanning tree of minimum cost. The solution presented is as follows: for any edge (i,j) , set $a_{i,j} = \max\{0, u_i - u_j\}$ make a matrix $A = (a_{i,j})$. And this is a complete and verifiable proof. Why does it look exponential? (I have an intuition that it may have something to do with the fact that there are $O(n^2)$ distinct values that can be the maximum between two vertices, and $O(n)$ edges.) A: Your solution clearly requires one iteration for each edge in the directed graph. That is an exponential algorithm (in the length of the input). Rocco Rossi, the Italian interior designer who curated the 2018 Venice Architecture Biennale, has died at the age of 65, making him the second influential Italian designer to go in the last month. Gianfranco Ferré, the Milan-based

scenographer who created the era-defining opera fantasy *The Body*, died in November. “Rocco Rossi took all of us—Italian architects, entrepreneurs, and artists—by surprise,” said Jörg Schmadtke, the chief executive of Architekten Friedrich Engel, in a statement. “He was an exceptional artist and is still considered one of the most significant voices of the post-war generation. His continuous efforts and commitment have greatly shaped the contemporary language of design.” Rossi, who was born in Turin in 1946, began his career as the principal designer of a group of Milanese architects, Arte Vecchia. Together, he and his collaborators, who also included Giancarlo Zanelli and Alberto Palomba, designed futuristic minimalist housing projects in the Italian industrial city of Faenza. In 1978, Rossi and his colleagues founded Rostagni Arredamento, the first design practice in Italy to focus exclusively on residential projects. The firm went on to win prestigious architectural competitions, including the 1994 renovation of the Pirelli Tower in Milan, the 2003
