D3doverrider windows 7 64 bit free download.Q: read_csv check that values exist and select them if they do not, in pandas I have read_csv in python: df = pd.read_csv('file.csv', delimiter=',', skipinitialspace=True) This will store the data in a DataFrame. I have tried the following to select data with some values which do not exist in my csv file: df.loc[(df['colA'] == 'somevalue') & (df['colB'] == 'somevalue')] df.loc[(df['colA'] == 'somevalue') | (df['colB'] == 'somevalue')] df.loc[df['colA'] == 'somevalue' | df['colB'] == 'somevalue'] Neither of these work. I have tried variations of filtering on multiple values but cannot seem to get it to work. How can I select the dataframe rows containing values in colA and colB that do not exist in the csv file? A: try this df = pd.read_csv('file.csv', delimiter=',', skipinitialspace=True) df.dropna(inplace=True) df['colA'] = df['colA'].replace(' ','_') df['colB'] = df['colB'].replace(' ','_') df.loc[(df['colA'] == 'somevalue') & (df['colB'] == 'somevalue')]
