Carnook2 3/14/2009 Hi, I've found a bug. When you use the wheel thingy to attack someone, sometimes the object hits their head off and they fall to their death. Hope someone can fix this bug. Sandro 3/13/2009 One of my main problem with the game are the glitches, it seems like almost any time I click on something there is at least one to ten glitch, which would make the game really unfun, but all you can do is go back to the previous menu.

Going into 1943, the western front was in a stalemate. German might wasn't ready for a crushing defeat, yet their aerial supremacy put Allied countries on the back foot. For the British, a new production order was set for Bulleid's Light Pacific Class locomotive, which were to enter service in 1942. Oliver Bulleid, CME of the Southern Railway, was on a mission to design a locomotive which could mount from the weaker southern network and perform like the Merchant Navy's predecessor, but with a more northern, post-war route availability. It was Bulleid's idea to give his new locomotive the air-smoothed, mixed-traffic performance of the Merchant Navy, but at a reduced price. The light Pacifics of the Southern Railway were just that, light Pacific, capable of operating in towns and villages across the British countryside, thanks to an air-smoothed design. In service, the Light Pacific played a prominent role in bolstering the British Railway's performance in the Western Campaign, especially during the Battle of the Atlantic. For countless nights, Britain's precious ocean trade routes were in a constant state of distress, and Bulleid's locomotives kept the steam going, allowing the new service to switch to a non-electrified route and still get in on the action. In 2015, British Railway Heritage went back to the steam era with a series of add-ons for Train Simulator aimed at recreating that time in history. This add-on is a vital part of the Steam Era Collection, and promises hours and hours of additional gameplay! Included Scenarios are:Over the Top Extra Load Southern in the Snow Please Note: The Somerset & Dorset Route Add-On is required, as a separate purchase, in order to play the scenarios featured in this add-on. More scenarios are available on Steam Workshop online and in-game. Train Simulator's Steam Workshop scenarios are free and easy to download, adding many more hours of exciting gameplay. ## **What's new:**

**Surfasaurus is a genus of duckbill dinosaur described in 1990 within the family Temnodontidae. Originally, the genus was classified under the family Hypsilophodontidae, but was moved to its current taxonomic status in 2005 after a re-examination of its type specimen and discovery of two other specimens. Surfasaurus was named in honor of Engelbert M. Schwab of Australia, where the type specimen was found. The species was classified as the sister taxon to Basilosaurus and the two are therefore collectively regarded as the oldest known duck-billed dinosaurs. Surfasaurus was once referred to as the most basal known dromaeosaurid, but now a recent study disagrees. A second species of Surfasaurus is also known from Pakistan. Characteristics Surfasaurus was originally only known from a single specimen, the holotype, BMNH I t. 24, acquired in November 1962. This holotype has a length of about, with a skull, long skull, and long tail. Its type skull was the subject of a study which found it to be intermediate between the dromaeosaurid and troodontid faunas of the mid-Cretaceous, and in that aspect was unlike the troodontids in addition to bearing a duckbill crest (a suite of large, widely spaced teeth in the bottom of the upper jaw, and a bony projection on the tip of the snout). With these bones, Surfasaurus fit into the troodontid group more closely than the other known duckbill dinosaurs. The second species, named as Surfarraptor, is found in Pakistan and is represented by a highly incomplete skeleton. The specimen BMNH I t. 24 was initially classified as a troodontid by Jack Harris and Paul Barrett in 1992. However, their hypotheses were rejected by Steve Bennett in 1994. These four researchers agree that Surfasaurus cannot be classified as a basal troodontid; rather it fits into the dromaeosaurid group. The late Yves C. Serge represented, and Bennett accepted the original classification of this genera in his 1995 and also 1996 monographs. Bennett considered SURFASAURUS among the most advanced and successful dromaeosaurids, emphasising the bird like tail and duck bill, and the large**
