Roblox is a sandbox online multiplayer video game that allows players to develop their own games by creating their own worlds. Players assume the role of a player character (referred to as "User", "Kid", or "Builder") within a sandbox environment. Players can play Roblox games with friends and other players, and create their own games with customizable components. While the basic programming and gameplay of Roblox is similar to games such as Minecraft, Roblox emphasizes player creativity over building and resource collection. Roblox's primary goals are to present players with many tools and modes of game creation, while providing players with the gameplay and developmental context to create robust games. The concept of "sandbox" – a game in which the player is given flexibility in the game world's design – was created for Roblox. Roblox's claim to fame is its break from the norm of highly linear, structured, and scripted games found in many other video games. The programming language of Roblox is Lua, which is also the base language for the construction of user-created games. Although Roblox allows the creation of games with a wide variety of genres, most games are developed as multilayered simulations (known as "sandbox games") with an emphasis on player creativity. The platform's focus on player creativity distinguishes Roblox from games such as Minecraft and Club Penguin, which take a far more "rule-based" approach, and are more structured or linear in nature. Roblox has faced criticism for some of its moderation policies. In particular, there have been reports that players with no Robux are not given options to quit a server, and that Robux itself is highly expensive. Since 2016, there have been reports that the platform restricts the ability of players to create accounts or log into a server or game with more than one account. Roblox has also been criticized for facilitating in-game monetization through the use of Loot Boxes. The developers argue that most games on Roblox are free of charge, but do not require microtransactions to play. In 2018, Roblox was added as a payment option on the in-game marketplace Steam, allowing players to access Roblox games and in-game objects on Steam platforms such as steam.com. Roblox History: Roblox was created in 2004 by David Baszucki and Erik Cassel, with Roblox Corporation officially launched
