Biochemical characters of the cytolytic activity of normal and malignant cells. The determination of several biochemical parameters of cytolytic activity of the cells is important for the investigation of biological functions. For this reason, effects of presence of the blood lymphocytes from patients with blood malignancies on the biochemical parameters of cytolytic activity was estimated with 51Cr-chromium release assay in vitro. The effect of normal cells on the parameters of cytolytic activity of the normal peripheral blood mononuclear cells was observed in the case of interactions of the prophocytes of the influence of malignant cells, as well as their impairment of interactions with each other, are directions with each other, are directions of their activity.
