2700c rm-561 v10.40 mikron Post by Serjik » 08 Feb 2011, 10:05 Hello! There is a machine 2700c rm-561 v10.40 mikron. After changing the firmware to 10.40, when turned on, it writes: Initializing... Unable to open firmware. Press the reset button for 5s to turn on. Press the reset button for 5s to turn on When you press the reset button, the backlight lights up and nothing else. And so on ad infinitum. Question: what can be done? Tried reset doesn't help. What else can you do (besides a reset)? Thanks Re:

Adsorption is a promising method for the remediation of hydroxybenzenes (HxBs) in the environment, although strong adsorption between the solid phase and HxBs in the soil have been observed. In this study, ZnO, Mn2O3, and Pb2O3 were investigated as sorbents to capture HxBs in sedimented soil. The ability of these metals to adsorb HxBs was evaluated using the equilibrium adsorption isotherms. For each metal, the adsorption coefficients (Kf) of HxBs for adsorption onto solid phase decreased in the order of phenol (0.1614 for Pb2O3) > p-hydroxybenzoic acid (0.0361 for ZnO) > p-cresol (0.0216 for Mn2O3). Among the adsorbents, Mn2O3 showed the highest adsorption ability to HxBs, and Pb2O3 had the lowest adsorption ability. The addition of 1.0 mM zinc solution significantly increased the HxBs adsorption by Pb2O3, and the presence of 2.0 mM Zn2+ decreased the HxBs adsorption by Mn2O3. The sorption process involved contributions from electrostatic, ion exchange, and π-π interactions. The results demonstrate the promise of using soil adsorbents for the remediation of HxBs in the environment. Aging in hypothalamic-anterior pituitary- c6a93da74d
