This is the new way of thinking about this problem. ~~~ maxerickson There's likely also a lot of cost associated with getting that functionality into the driver. Going to the next level of abstraction would be interesting if the 'willing' driver software package ever came out. ------ alexanderh I'm pretty sure that an implementation of the game of life in a virtual hardware system would be much easier to write than an implementation in Mono. ------ quotemstr This article, and stuff like this, is one reason why I'm trying to sell my infrared camera. My current market value is $10. A good user interface, and better hardware, and it could go for more than that. I'm not sure if any of this is going to be practical for a real-life product, but it's still fun to have the idea. ------ nandrij Glad to see the driver writer is getting out more! I find it interesting that they first mentioned the xmonad inspired "driver style", after discussing their experience with xmonad, in the blog posts about the implementation of xmonad. ~~~ sjwright I couldn't agree more. Nothing should take 50 lines of code to write. ~~~ Natsu Except that drivers _are_ supposed to take 50 lines of code to write. The usual driver model is to take the entire physical resources in a PC and expand it to pure code. Half the lines of code you c6a93da74d
