to begin, you can import your existing database files (.rfa and .ras) by simply clicking file > import. and yes, you will still be able to use the old file-import tool on the main screen, though you'll also find the new tool on the menu bar. the new file > import tool lets you drag and drop files from your computer into inventor (or email the file to autodesk's support email address), so you don't have to copy and paste it to get it imported. if you're importing a database file, for example, inventor will automatically generate the project for you. inventor is a parametric solid modeling program that allows you to create a wide variety of models quickly and easily. you can create basic models with standard shapes and materials, or you can create complex models that have complex geometric shapes and detailed material properties. inventor's surface modeling tools help you define your model quickly by giving you the ability to create a project by simply creating a new view, and then using the surface tools to create the surfaces that you need in your model. these include standard surfaces, such as cylinders, cones, and hyperboloids, or you can create your own surface types. you can also define your own surface-related attributes, such as the surface material, contact points, and features. you can also use the standard surface tools to create extruded, revolved, and swept surfaces. these provide a great range of capabilities for creating such surfaces as coning, chamfering, and cupping. inventor's surface tools are tightly integrated with the rest of the application, so you don't have to learn a new interface.
