there are many other features included in the scenery. however, if you are asking yourself these questions, you will not need me to tell you, since this scenery has everything you need to explore the united states! this is the case for as much as the terrain and the airport. all the buildings of the us have been modelled in great detail and each of the buildings are unique in their own way. the buildings have been created using a combination of 3d studio max and real images of the buildings. since this scenery includes a list of a few dozen structures that we decided to include in the scenery, let's talk about some of the new buildings and structures. the default runway

in this airport is an alpha runway. a beta runway is available, but it is in an early state of development. please download this airport from the download section on this site for an upcoming major beta release. usa cityscape adds much-needed realism to the usa scenery that's been available in the market for many years. the new features include an updated parks folder and enhanced vcx files, but the only feature this mod really offers are the new ndb procedures. this is because most airports don't use them. this adds one thing to existing airports and adds one thing to the scenery. there are no game-breaking bugs and the price is very fair. i recommend this for the us scenery alone and will be using it to update my own scenery with more airports very soon. the burglars' shrine features a beautiful decoupled simulation of aircraft arrivals and departures. the scenery is great, but even better is the optional buildings that can be added on top of the building if you find such objects in your game and want to expand the scenery.
