What's the difference between Microsoft Office and Microsoft Office 2013? That's more of a "when" than a "Why?" At the most basic level, Office 2013 will give you a new ribbon. If you're an Office veteran, you're accustomed to the old one. If you bump into Office 2011 today, you can still find it in the taskbar, if you really look hard enough. In addition, you can use Office OneNote 2013 on the iPad Pro, and Microsoft Word on the Mac version of Office 2013. This isn't to say that it's useless on our non-Windows devices, you know. But the laptop version of Office has been around for a few years now, and it's just been updated. I'm surprised at how Microsoft hasn't faced this critical decision and released sync apps for the rest of its apps. Microsoft Word 2013's keyboard shortcuts are laid out differently. Instead of holding the FN key, you access them by pressing the F1 button. A lot of these commands are very intuitive, such as H for the Home tab, B for the Bookmarks bar, and M for dedicated page margins. On the other hand, if you want to copy a complete page or section of a document, you have to exit out of Word and then copy the section that you want and paste it back into the document. If that doesn't sound like a big deal, you can still scroll to that section using Filmstrip View and the Arrow Keys while holding down Shift. A little bit of accessibility-on-foot navigation is an admirable goal, I guess. If I had to complain about something, I'd say that it may seem a little too "techy," a bit too difficult for some beginning users.
