Performance has been improved as well. Photoshop Elements often loads and runs faster. Adobe has also improved its algorithms for order-sorting layers. Photoshop is the industry-standard graphic design tool, and if you want to design web or mobile apps, or anything else for that matter, you can't afford to get it wrong. Adobe's highest-rated app has just received an important update with major features. It's been nearly a decade since Photoshop debuted, but with version 24 users can expect a lot more in terms of performance and speed that will surely please. Of course, not all of the program's features are updates—especially with a software company stubbornly sticking to the tried-and-true design of the tool. Photoshop is set to still be a powerhouse for the foreseeable future. Adobe Photoshop has always had great tools to work with and since upgrading to the latest update, the tools have been improved even further with new features, updates, and being more intuitive than ever. I don't like to be negative, but I do think the product doesn't quite have the same quality as ACR. I am torn on the idea of whether or not to keep up with the latest version of Photoshop or just stay the course and focus on getting my images to the surface. Do I have the money to pay for updates or upgrade to the newest version of Photoshop or Cloud or go with Lightroom. Whatever the issue is, there is the slightest possibility that I will not keep up. So, the question is, "Should you move up to the newest version of Photoshop?"
