**What's New in the?**

DM Net Time & Watch Administrator is a monitoring application that can create reports with the activity of other users, such as used applications,

visited websites, or typed words. Monitoring tool with client and server It consists of two components, client and server, and any of them or both can be installed during setup. The server gives control over machines where the client module exists. If both exist, then the administrators can monitor and restrict access to other PC users. The communication method between the server and clients has to be established during setup, which can be represented by shared folders, named pipes, or TCP sockets using a custom

port. Set up restrictions and log events From the administrator's control panel you can find out all monitored and restricted PC users, set up restrictions at any time and on any days of the week, enable a weekly cap, as well as log activity for various events, such as launched and closed applications, URLs of visited websites, or keyboard activity. Screenshots can be captured and saved automatically and regularly. Moreover, you can enable user warnings when starting the monitor or scheduler, before ending the monitor, and when

logon is denied. It's possible to password-protect DM Net Time & Watch Administrator, configure web filters, analyze statistics for any logged days, use a search tool, as well as import and export data. Evaluation and conclusion It didn't put a strain on the computer's performance in our tests, thanks to the fact that it needed a low amount of CPU and RAM to work properly. No error dialogs popped up and it didn't hang or crash. The advanced settings are fairly intuitive, and you can learn more from an integrated help manual. To

conclude, DM Net Time & Watch Administrator brings powerful options to the table for monitoring and recording other users' activity. DM Net Time & Watch Administrator is a monitoring application that can create reports with the activity of other users, such as used applications, visited websites, or typed words. Monitoring tool with client and server It consists of two components, client and server, and any of them or both can be installed during setup.
