Photoshop's announcement was greeted with joy by many Adobe fans on the web: after all, the program has been, for many designers, indispensable. The company now has people who are working on the next generation of Photoshop. A few hours after the news was announced, the first responses on this site appeared, in which users sent comments, messages and images to express their joy as longtime fans new the future was promising. Adobe has recently announced the new feature releases for Photoshop for 2021, as well as a range of new additions to Photoshop Elements. On Photoshop, there's a number of new and exciting features, including reimagined filters powered by Adobe Sensei, which allow you to change the direction of a person's gaze in seconds (it's pretty trippy stuff!). You may remember that Adobe held an experiment for six months in which they streamed a live, occasionally updated stream of Photoshop. Then, after the experiment was over, they created a web page with the donated videos and images. You can watch that live stream here: https://www.adobe.com/cfusion/exchange/index.cfm?event=homepage-live-stream Now, you can update and roll back your ever-changing and collaborative files without losing any formatting or data thanks to Enhance. This new workflow feature takes place in the background, and works in the background, allowing you to continue working without interruptions. Other than that, you can now archive images based on their content, such as graphics or text, or select which layers to include in the archive. This is especially useful for storing large batches of files in the same archive.
