Fractalyse is an interactive software to measure the fractal dimension of built up areas of cities, it shows the fractal dimension of all kinds of built up areas, curves and networks. It is very easy to use, you only need to specify the background image, the foreground image and the objects of interest. This is a commercial version of the "Fractalyse" software. 1) How to run the application (1) Copy/move the program files into the "C:\Program Files" directory. 2) If you would like to use "C:\Windows\System32" directory, you will need to edit the "Registry" file, "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\Release=" to "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\3.2.0\Release", "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\Release=" to "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\3.2.0\Release" and "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\Release=" to "HKEY_LOCAL_MACHINE\Software\Microsoft\Fractalyse\3.2.0\Release" in the "Registry" file. 3) A button is displayed to Start the software. Click the button to start the software. 4) In the following window, select the Background image, foreground image, the objects of interest. 5) Specify the background image path, foreground image path and the objects of interest, then select the Run the software. 6) The result is displayed in a new window. Fractalyse is an application to measure the fractal dimension of built up areas of cities. This application is designed to be used to compute the fractal dimension of all kinds of built up areas, such as city, curve, networks, etc. You need to specify the Background image, Foreground image and the objects of interest. Note: The function will be processed only after the above step is completed. Fractalyse Description: This is a commercial version of the "Fractalyse" software. 1) How to run the application 1) Copy/

- To compute the fractal dimension of the images, set all preferences to basic. - All settings are saved into separate file, including the output. - As many images as you want. - The output is in.txt file, based on an interactive window. - Default output scale is 1:10. You can change it with: "Output scale: 1:10", "Output scale: 1:2", "Output scale: 2:5", "Output scale: 5:10" - The width of the image must be at least 1.3 times higher than the height. - Note: The output scale can not be changed with keyboard shortcut. - When you've finished with the desired output scale, use: "Reset scale" ... "Static" Design - Floating-Point By: @Kerdon (@Culter) Description: Use the FS and S attributes to enforce a floating-point precision. Works with any "floating-point" design. - Force FP precision to a single-precision floating-point format. - Set FS and S values to 1.0. - Use values from 0.0 to 1.0 for FS and S. - FS and S must be declared before a "floating-point" design. - After that, you can use "FS" or "S" in a "floating-point" design to change its precision. It's very useful to force a design to a single-precision format. More details about design attributes can be found here: "Sudoku Viewer" By: @Kerdon (@Culter) Description: View Sudoku boards in a spreadsheet. Use the most popular designs. This is a standalone Java application. - Suitable for Android, iOS and other mobile platforms. - It was tested on 2.3.3 and 4.0.4 - At least JDK 1.7 is required. - There is no extra need for Google Play. - No extra hardware is required. - Tested on tablets and phones. - This app is only compatible with "floating-point" designs. - Just scroll down to see all available designs. - You can click on the appropriate design to change the 2edc1e01e8

Fractalyse is a C program designed to compute fractal dimension of cityscape. Fractalyse runs on Windows, Linux and OSX. It takes one or several 8-bit images and calculates their fractal dimension. It can also compute the fractal dimension of curves and networks. Just like a bunch of other Mac apps. I've downloaded a couple of other apps that set their own menu bar, and they look really nice. Is there a way I can get that for my own app? I know it's possible with Xcode, but how to set my own menu bar with the code only? A: Use Xcode 5 and the new AppKit "NSMenuBar" API. There's a WWDC video of Apple showing how it's done. --- author: - | Jeffery Shlens, Chris Olah, Pieter Abbeel\ UC Berkeley\` {jeffery,chris,pieter}@eecs.berkeley.edu`\ bibliography: - 'icml.bib' title: '**Solving Task-Guided Motion Planning for Continuous Control**' --- Acknowledgments {#acknowledgments.unnumbered} ===== This work was supported by the NSF under grants CNS-1064798 and CNS-1115886 and by a gift from Adobe. What's New in the Fractalyse?

This application is to compute Fractal Dimension of images, curves and networks. It is used to measure degree of roughness of objects. It is used to compare the degree of roughness of different images. Features: 1) Image processing tools for computing fractal dimension of curves, curves, curves, curves and curves 2) High efficiency, easy to use. 3) Output results automatically in PDF format. The Fractal Characteristics Viewer The Fractal Characteristics Viewer is a tool to calculate the Hausdorff dimension of a curve and the lacunarity of a fractal pattern. Useful for academic and practical purposes, it provides various methods to estimate the Hausdorff dimension. The Hausdorff dimension and the lacunarity are general concepts, and useful tools for checking the roughness of images, measuring the degree of roughness, and studying the patterns of different shapes. The application provides support for image input. It can estimate the Hausdorff dimension of curves, and generate other related data, such as Hausdorff dimension, lacunarity and the approximation box. Hausdorff's method is one of the most widely used methods to calculate the Hausdorff dimension. But it is not efficient for real-time applications. In order to improve the efficiency, a new method is proposed to calculate the Hausdorff dimension. It is different from the existing Hausdorff's method in the way of data processing, and more efficient to calculate the Hausdorff dimension. Please note that this application does not implement the Hausdorff's method. It implements the proposed new method, so that it can efficiently calculate the Hausdorff dimension of curves. The Hausdorff's method is implemented separately. Hausdorff's method is one of the most widely used methods to calculate the Hausdorff dimension. But it is not efficient for real-time applications. In order to improve the efficiency of Hausdorff's method, it is necessary to make sure that the nearest points of the sample points to the curve are in the same side of the curve. However, if the sample points are far away from the curve, the estimation will be not accurate. In order to improve the efficiency of Hausdorff's method, it is necessary to make sure that the

Mac users: A Macintosh computer with a PowerPC processor, 128 MB of RAM, and Mac OS X v10.3.9 or later is required. Windows users: The downloadable version of Trial Version 1.0 and above requires Microsoft® Windows® XP, Windows Vista®, or Windows 7™ operating system with 1.0 Gigahertz or higher, 32 MB of RAM, and DirectX®9.0 compliant graphics hardware and hardware acceleration. Mac and Windows users on Macintosh and Windows computers must also be able to install and run the GMG-v
