The other big addition is Photoshop Mask. You can use it to show or hide specific layers or regions in an image to reveal or hide portions of the image. You can even edit that mask so you can change the visibility of part of an object in a specific photo by zooming in and out. The Mask Panel gives you visual previews and lets you work on the masked areas as you do other elements of an image. To add a bit more power, you can add multiple versions of the image as a content-aware selection. This means you can apply all the previous edits to a specific area of the image (exercising the Selection Mask option), as well as to all visible layers of all versions of the image (exercising Content-Aware Option). All the changes made to the versioned areas can be recalculated for the new image. It's not to say that Editing Options isn't getting smarter. In the last version, you could store your adjustments and other edits as profiles for specific images. You can now set a specific set of edits or adjust sliders for each image or set of images with one click. This lets you save time all the while giving you a more refined set of tools. If you've ever used a mobile device – and a lot of people have these days – you'll appreciate the revamped Selection Panel. You can now see your selection options (lock, pixels, ink, etc.). You can also drag and drop to

move and reorder elements. Plus, the icons that used to represent different selection modes now show exactly what is selected.
