If you have one of the two, you can continue to use the Mac version, of course. And, here's the good news: the updated Photoshop CS6 (it's now Photoshop Creative Cloud) is now available for the Mac. It's stable as a rock and has all the features you have come to depend on in a serious Photoshop app (if it did, it wouldn't be called Photoshop). It's 2015, and the iPad is our most prominent computer. An artist I know can't tinker with his Photoshop files if he has to have a bigger screen. His laptop just isn't doing it for him. Uproxx posted a beautiful essay on why its increasingly making Photoshop more appealing . It cites the following: Cole Roberts said, "If I want to edit, I want to use a Mac. If I want to pre-visualize, I want to use the iPad." He also says that the Mac is not as intuitive as the iPad for doing the latter. So why are notebook users still even an afterthought for video production experts like the ones I know? Because, in the wrong hands, the Mac might make you a capable user, but it will never be as good a teacher for pros as the iPad. It might never be a first-choice production center. Speaking of first-choice productions centers, Noah Shibleys reviews Top 10 iPad Apps for Photographers . The apps he lists are the ones most likely to appeal to photographers (and painters, sculptors, etc). I'm currently an Adobe user. I started in June with Photoshop Elements 6. I've found it to be an excellent, very capable package. I still use Elements for web design and editing JPEG files. Lightroom 5 looks like it will be a breath of fresh air. It's got a very good interface and, like all recent versions from Adobe, is loaded with new features, especially in the areas of flash, film, and still photography. The price is comparable to Photoshop CS6, especially when a subscription is factored in. If you are a digital enthusiasts and want the best workflow tools around, you need to check out Lightroom 5. It may not be ready for prime time yet, but I'm looking forward to its development.
