The app is placed in the Filter menu (in Photoshop), under the developer's name. Running it triggers another window to appear. This enables you to customize the way the picture looks. For instance, you can adjust the sharpness and the line width, the radius and the diffusion levels. Additionally, the brightness and saturation values are possible to modify. All the changes may be viewed in real-time in the app's interface. A few preset modes can also be applied, such as crayon or glow. Processing takes only a few seconds, depending on the picture size, but also on the system's performance. All effects are based on the extraction of the so-called hidden fractal texture of an image, which means the output won't look like someone simply overlapped two images. When the job is done, you must simply approve all modifications. The image appears as a new layer over the background. Thus, further adjustments can be made to the picture.
