BitKeeper BitKeeper is a collaborative version control system designed for commercial-grade distributed source code management. Users work on multiple computers, sharing and synchronizing versions of their files using a web-based interface. It was originally developed at Google, was subsequently acquired by BitWise, and is now available for both cloud and on-premises deployment. Version control and branching are supported, and developers can choose to keep changes private until they are ready to publicize them. Version control BitKeeper features a "version control system" that tracks the code changes made by each contributor to the project and enables the developer or other team members to roll back to a previous version if they find that their changes have had unexpected side-effects. The feature is based on the concept of branching, where, instead of using a rigid branching model, developers can branch from any of the commits (or snapshots of code 2edc1e01e8

LibZIP

LibZIP is an audio software application whose purpose is to help you transfer any part or your entire iTunes music library from one PC to another and create ZIP archives out of iTunes files. Simple layout The program reveals a clean layout that allows you to share items by simply dragging and dropping iTunes files directly in the main window. In order to send the items to another computer, you need to run the utility on the target machine. The connection is established by specifying the IP address. Create ZIP archives LibZIP makes it easier for you to generate ZIP archives of your entire iTunes music library or only songs, videos, playlists, TV shows, podcasts, purchased audio files, or specific entries matching your specified pattern in your iTunes music library. What's more, you are allowed to create a backup of your iTunes data to ZIP file format, specify the compression level, set the ZIP folder location, ask before receiving files, replace the existing items, show the transfer folder, as well as unzip a shared file. The application gives you the possibility to select between several online services for transferring files via your web browser, check out logs which contain information about the file transfer process and possible errors, open the folder with the transferred files directly from the main window, and erase Windows temporary files. Bottom line All things considered, LibZIP delivers a straightforward approach for helping you transfer audio files from one PC to another, and can be handled by beginners and professionals alike. There's only a single problem: the app hasn't been updated for a while, so can make use of its capabilities especially on older operating systems like Windows XP and Vista. ScorchDrive was founded in 2011 by a crew of professional gamers, and with the aim of providing an online storage service that is easy to use and offers high levels of security. They claim that their software is completely safe, offering 100% privacy, and that the data stored on their network will not be sold or traded. In other words, they want you to feel safe as you log into their network. They also offer the most reliable service, with a 99.9% uptime guarantee. Moreover, they offer a free trial for up to 90 days, which you can use to check out their service before committing to anything. After signing up for ScorchDrive, you are given a folder where you can deposit your files and drag them directly to the ScorchDrive website where they will be uploaded to their cloud service.
