You can export as a PDF from Photoshop, and even export a Photoshop Layers or Smart Sharpen layer as a PDF. Even if you don't use the built-in PDF feature, zooming and printing at full resolution is remarkable. Just bear in mind that you're not doing very good, if you can't print your own photos in a photo lab. "Imitation is the sincerest form of flattery" didn't always hold true, but it is The Prince of Wales (as the rest of the text in this section will attest). Profiles are a staple of Photoshop. Whether you like them or not, they are an important concept in most editing workflows. They let you save time by just switching to one of several settings for a project. Once you're done working with a photo, you can choose to produce a version with a particular finish from one of the various presets, or you can create your own profile. Be aware that the presets are specific to the type of work you're doing. That means they'll work great for one project, but not so well for another. You'll have to try each preset from the factory menu and see which one(s) you think are most like the look of your work, or you could try to do your own profile, as I've done with several photos. In the Standard preset, you'll find the oft-requested white balance and exposure tool (the R, G and B sliders that you'll see on virtually every photo in any color space I try to convert to in Lightroom).
