Visual Studio. 2013 for Windows 8.1.[Serologic test for primary and secondary syphilis and comparison of 3 diagnostic procedures]. In this study we wanted to test three different serological methods for syphilis. Therefore, samples of serum and both cerebrospinal fluids were examined for antibodies to T. pallidum, using the chemiluminescence test (CLO-test, Murex) and the indirect hemagglutination (IHA, L. Borchardt) as well as the hemagglutination reaction (HA, VDRL). 320 sera were investigated, 160 of them were from patients with syphilis, 80 serum samples came from patients with other diseases, 80 samples were from patients after penicillin-treatment. The sensitivity of the CLO-test was 96.9%, the specificity 96.3% and the total sensitivity and specificity for the determination of both syphilis types was 100%. In comparison of the IHA and the HA-tests the sensitivity and the specificity was 98.5% and 100% respectively, for the HA-test the specificity
