The Web-based Photo Downloader interface, which comes packaged with the latest version of Photoshop, might be more useful to the everyday user, yet the program is still in need of a few tweaks, most notably to make it more user-friendly. Adobe Photoshop is now a well-rounded app that not only makes digital image editing a smooth, well-rounded moment in the process, but also that enables deeper, artistically based work for more and more. After all, there is nothing like a good lesson in Photoshop for sharpening your photo-editing skills. With over 900 million copies of Adobe Photoshop sold since its debut 19 years ago, the Photoshop brand has been infused into nearly every aspect of photography. That huge success, along with usage trends such as cloud collaboration, social sharing and “the move to mobile,” has led to a dramatic upgrade in each update to the flagship App. Adobe Photoshop is best with an investment. For video post work, it’s a second tool; it’s good enough to make quick edits within an hour of a scene being done, but not good enough to produce a high-quality final cut. I have a question for the Apple/Adobe team. You have a great Photoshop workflow. Photoshop CC makes it even better. Why not integrate that with this app? Let’s use the same workflow engine, the same brushes, the same file menu.... (Like you do with Lightroom). Is the file system (iCloud) not sufficient to keep your Photoshop CC files safe? Does the file system need some enhancement? If so, how?

It's easy to fall into the trap of starting early and always finding we are running out of time. If you always start your project with a 2 week deadline and then find it's taking three or four months, you can ruin a client's relationship because the work just isn't done by the time they want it.
