Cracking Adobe Photoshop software is a bit more involved. You first need to download a program known as Adobe Photoshop's Patch.exe software. This is a program that will generate a serial number for you, so that you can activate the full version of the software without having to pay for it. After the serial number is generated, you need to locate the serial number and enter it on the Adobe Photoshop Patch screen. An additional benefit of Adobe Photoshop is that they provide free image editing software that is called Adobe Photoshop Elements. I had a similar problem as Sren. I was using a web site to host multiple raster images, and the scripts broke. Besides, web hosting services cost money. So, I had to make an FTP connection, and upload the raster files. This wasn't a problem in version 4, you just clicked on the files and they were added to your Lightroom catalog. Version 5 does the same thing, but with a garbage ware system. The connection keeps freezing over and over again. Why don't you idiots make an FTP connection in the first place, and not have that same garbage ware system as well? Why does everything have to be so hard? I just upgraded to the latest version of Lightroom. It is both much better technically, and more of a nuisance to use. It is MUCH better technically in that you can see a whole zillion images at once in a grid of any size in the viewfinder; and of course in that you can have, say, 6 people in your entry and still see them all at once; and in that you have much improved palettes; and in that you can tweak curves; in that you get precise control over the whole list of parameters of image adjustments; and in that you can batch process 8 or 10 images at once. You get the point. Of course, this all works great except that Lightroom is still a total pain when you want to go to the next image. Pressing one i ncase does not bring up all the other images fast like it did in previous versions. Instead, it goes into the image's folder, and brings up all the other images in the folder. If you have a lot of images, this can be a pain in the behind. How is one supposed to leave a folder with hundreds of images and go back to Lightroom?

If you do choose to upgrade to Photoshop CC for those licensing reasons, you should be clear about how long your upgrade will be honored. You can see your license details on the EULA page of the Creative Cloud site. Never again will you have to download and install new plugins when using a device that originally doesn't have the necessary software.
