This comparison is intended to help you explore Photoshop on the Mac. I like it, so I use it in-house. If you don't, the pros and cons might just make you reach for your copy of Photoshop Elements instead. It can take awhile to learn it (as with any photo editor). Photoshop has become synonymous with images — painting a picture is a powerful metaphor. In some ways it's more powerful than the alternatives, but this comes at a cost. It's often said it doesn't matter what the details of the object are—it's only the relationship that counts. This Polish proverb makes sense in the context of channel and light assignment in the new Photoshop's Radial Gradient and Spot Color/Channel. The Radial Gradient makes creating rich-looking patterns and fills much easier than ever before with the touch of a button. The Radial Gradient and Spot Color/Channel let you create a gradient in practically any form and style imaginable. The Spot Color/Channel panel is the fastest way to save a color as a gradient or pattern. To create a color swatch or channel you just need to pick a color and set it to be the "spot color," which is a light black. The channels are now much easier to manipulate and edit than in previous versions. The Spot Colors are much faster to select, manipulate and export. Let's take a closer look at Lightroom 5's now-powerful new selection features—also available in Photoshop. The new Lightroom features are not optional fancy features in Photoshop. They are a requirement to access the new features. The new software is loaded with new tools for online photo sharing, sorting within a collection, and a wealth of other features. In the Camera and History panels, the ones I most like are the new Optimize for Search (also called Optimize for Speed and Optimize for Reduced Retouching) tools. These ease the process of producing images for online sharing.

This tool lets you adjust the colors and saturation of each individual pixel, and is available in most image editing programs. If you start on the left end of the color wheel, you're adjusting the colors in the light colors, and the opposite end of the color wheel represents the more saturated colors. Generally, light colors deliver the truest, most accurate results when working with color-correction software. However, you may notice some very cool gradients on text, or colors like skin tones that get their shine from the light colors. By going to the opposite end of the color wheel—saturated colors—you can make your colors and gradients more vibrant, or you can adjust the colors of specific areas—like a neutral background or a skin tone, for example—to make them more graphic and striking. This is your first step when editing your photographic images. Removing all of the background is usually the most tedious part of any image that you'll be working on. Go to Filters > Enhance > Adjustment > Levels and, using the Elliptical Marquee tool, click-and-drag out just the background. You should now have just the image you're editing, which should be in black and white. The white background has just now been replaced by a soft gray. To set a new background, go to Filters > Overlay > Color Overlay. Make sure that the background layer is selected with the Eye Dropper tool (located in the top-left-hand corner of the image) and click-and-drag over the image, and choose any color of your choice. If you're not sure which color to choose, try black, or gray, as they're often good starting points. e3d0a04c9c

- **Improved Adaptive Wide Gamut:** Our engineers have enhanced Adobe Camera Raw's Adaptive Wide Gamut technology to make raw-processing workflow more intuitive and improve the quality and color management capabilities of the Lightroom Lightroom catalog.

Lightroom CC users can now process raw files, and catalog import new files, with native 10-bit processing. Additionally, users can now output files with 8-bit color in-camera, as well as choose 12-bit color on the Lr CC desktop.

- **Camera Roll Sharing:** When you take a picture, it can automatically be added to the Camera Roll. You can then instantly see that picture, with an instant thumbnail, and you can share the image over social media in a single click. This new feature, available in Lightroom CC, has impactful benefits. For example, if you're in a location with poor WiFi and slow download speeds, you'll likely want to make sure you have that picture on your device immediately. This new sharing feature also makes sharing related to an event easy - simply save your event preview or event slide share from the Lightroom catalog.
- **Adobe Master Collection:** With the release of Adobe Master Collection, photography customers will have the ability to purchase foundation imagery from new Open Stock Asset Sources, such as The Future of Pictures (FOP), CenterPoint, Picture Perfect Pictures, and Creative Market. Users will also be able to collaborate on stitching the foundation imagery together into a single panoramic image that can be delivered via P2P, FTP, FTP Transfer, Amazon Web Services, or your preferred cloud storage provider. This new foundational imagery gives customers creative control of their imaging needs. It also provides a robust photofinishing workflow with Adobe Master Collection.
- **Retouch Finder:** In conjunction with Adobe Lightroom CC, we introduced Retouch Finder to give customers the attributes they need to improve the workflow of retouching imagery. Retouch Finder gives customers instant retouching capability by allowing users to find and apply the same attributes as their subject, in the cloud with their current cloud-based editing software.
- **ACR Link:** Our engineers have enabled ACR with Lens Correction (ACR Link) to significantly improve the workflow of mobile photographers. ACR Link allows users to view, edit, and apply lens corrections on the fly in Camera Raw.
- **Collaborate with the Peacock:** We've enhanced the performance of shared printing documents, including paper size, page layout, and printing on printers or mobile devices, and included resolution as a default setting in Lightroom CC. The Peacock is a new addition to Lightroom CC, so you can now see what your colleagues see as they edit your shared documents.
